

Instructions for HeBlad's concrete products

Thank you for choosing one of HeBlad's quality concrete products. In order to ensure a long and trouble free experience please refer to the following instructions.

Please read them carefully and retain them, along with any other documentation supplied, for future reference.

Assembly and installation

Our products are usually supplied pre-assembled by our team of experienced craftsmen. It is important that the base is properly prepared in advance of the equipment being installed. The site itself should be level, firm and the surrounding area should be free from any potential trip hazards. Please also ensure that there is sufficient clear space around the equipment.

The base itself should be regularly checked for signs of deterioration and any resulting instability of the equipment.

Maintenance

When cleaning the surface please only use water and an organic multi purpose cleaner.

Do not use harsh/corrosive chemicals and/or sharp/abrasive cleaning utensils.

Coloured surfaces can be protected from damage and refurbished using paint of the appropriate RAL colour. Please contact the manufacturer for further details.

Please also contact us for advice on repairing minor damage. Products found to be defective on delivery may be repaired or replaced, depending on the severity of the problem, following discussion with the manufacturer. Details of your equipment, including the dimensions, can be found on the delivery note.
